APPENDIX

CLAIMS PENDING AFTER ENTRY OF ABOVE AMENDMENTS

124. A method of reducing antigen-stimulated IgE production in a mammal, comprising:  
administering an immunostimulatory polynucleotide (ISS-PN) to a mammal sensitized to an antigen,  
wherein the ISS-PN comprises the sequence 5'-cytosine-guanine-3', said administering being in an amount  
sufficient to reduce IgE production stimulated by the antigen in the mammal.
125. The method of claim 124, further comprising co-administering the antigen to the mammal.
126. The method of claim 125, wherein the antigen is encoded by a polynucleotide which is  
expressed in the mammal.
127. The method of claim 126, wherein the antigen-encoding polynucleotide comprises the ISS-  
PN.
128. The method of claim 125, wherein the antigen is a polypeptide.
129. The method of claim 124, further comprising co-administering to the mammal a polypeptide  
comprising an immunogenic epitope of the antigen.
130. The method of claim 124, further comprising co-administering to the mammal a  
polynucleotide for production of a polypeptide comprising an immunogenic epitope of the antigen.
131. The method of claim 130, wherein the polynucleotide comprises the ISS-PN.
